

Density of entrained air-containing coating slurry
as function of ambient pressure at equilibrium and transient states

Figure 1

Dual core-module apparatus for continuous measurement

Figure 2

Single core-module apparatus for dynamic state measurement

Figure 3

Static density measurement apparatus

FIGURE 4

Static volume measurement apparatus

FIGURE 5

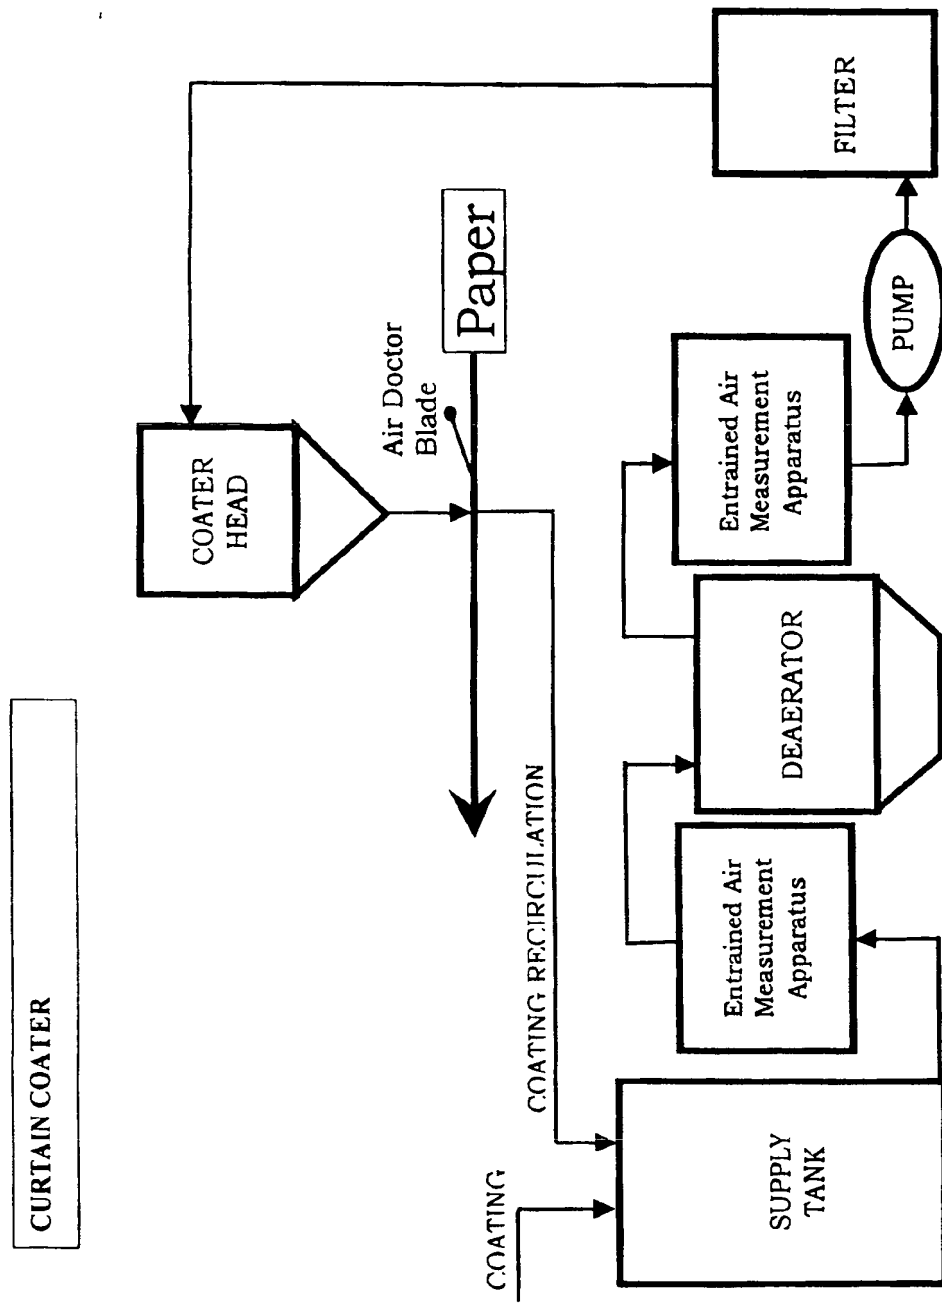

Coating application system

Figure 6

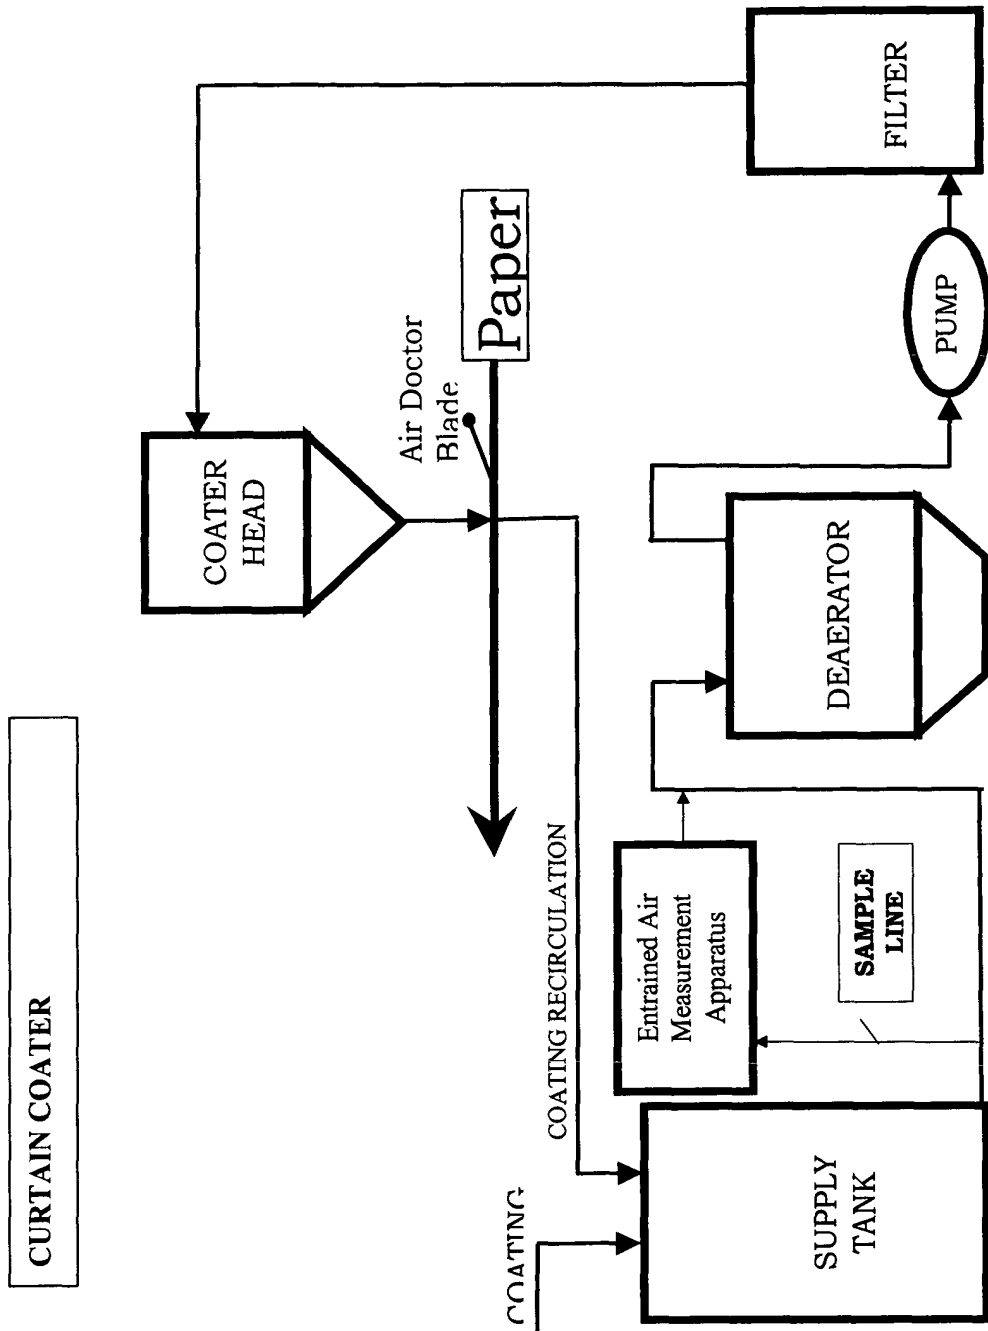

Application of system to a Fruit Canning line

Figure 7

Entrained air measurement installed in both inlet and outlet of deaerator for quantitative determination of deaeration efficiency

FIGURE 8

Entrained air measurement installed in a sample line
